

## Where does your recycling go?

**PAPER** is recycled into rolls of newsprint for use in the newspaper industry.

**CARDBOARD** is recycled for use in the packaging industry.

**PLASTICS** are sorted into different grades and made into various items including plastic bags.

**ALUMINIUM** is recycled into electrical and vehicular components.

**STEEL** goes back into making more food and drinks cans.

**GLASS** is crushed and used to make insulation and fibre glass.

**FOOD WASTE** is made into soil improver and used by farms to re-nourish land.

We always use local, UK based reprocessors to ensure the valuable material is recycled and helps the local economy.

## Why six bins?

To keep the material clean and separate, please sort your recycling and make sure that it is placed in the correct recycling bin. This means that we don't have to separate it back at our depot and we can recycle 100% of what you put out.

## When will the bins be emptied?

We will empty the bins every week, but you can use them whenever you need to. This means you do not need to store your recyclables in your flat, helping to save space. Simply take your recyclable items and put them into the correct bin! It's that easy!
